tailoring the treatment to the individual patient can improve the effectiveness of
psychotherapy to do so the treatment or strategy with the best prognosis for the
individual patient can be selected at the beginning of therapy furthermore the
therapeutic approach can be adapted during the course of treatment to support the
therapist in such decisions prediction algorithms are used which are able to process

complex and comprehensive data precision mental health statistical methods used in psychotherapy research to analyze data and develop predictive models have recently become more advanced however algorithms cannot do better than what the underlying data provide them in terms of information therefore our predictions and recommendations could benefit from a broader range of data beyond the traditional patient or therapist rated questionnaires
